Catalog Description:	Software development tools and practices; debugging and testing; advanced language features; standard libraries; code management.															
Prerequisite:	Grade of C or better in CS 141 (CS 102)															

The programming projects will be given out every other week during the lecture on Monday and are due by 11:59 pm on Thursday of the following week. Each programming project will count for 5% of the final grade. **No late programming projects will be allowed for this course.**

The lab exercises will be given out almost every during the lab. Students will have 60 minutes to complete and turn them in during that lab. Each lab exercise will count for 2% of the final grade for a maximum of 20% of the final letter grade. **No late lab exercises will be allowed for this course. You must attend lab to get credit for the lab exercise.**

During the lab periods, students will also take part in Code Reviews. Code Reviews will have the students divide into groups of 3 students. The members of the group can change from week to week. One student will present his/her code from a recent (or current) programming project to the other members of the group. The other members are to provide comments and feedback on the code presented. Each student is to present code on 3 occasions and review on 9 occasions. **You must attend lab to get credit for the Code Reviews for either presenter or reviewer.**

The exams for the class will have you write a working program on a computer in a computer lab during the time allowed for the exam. The first exam will occur during the lab time. The second exam may occur during the final exam period if we can set up the proper accommodations for the exam; otherwise it will occur during the last week of the semester.

The course will be divided into 3 parts:

1. C Pointers
2. Tools and Techniques
3. Object Oriented Programming

C Pointers will include the use of pass-by-address parameters, dynamic arrays, and linked lists. **Tools and Techniques** will include the use of debuggers, version control, recursion, test case development and command line interfaces. **Object Oriented Programming** will include the creation of classes in the Java programming language. Each section will last about the same amount of time. The Tools and Techniques portion may get intermixed among the other 2 parts.

If you have any questions regarding how any assignment or test is graded and you think that you deserve more points than you received, you must see the instructor about this within one week of the time the assignment is first returned to the class. No claims, justifiable or not, will be considered after this dead line.

Attendance at lecture is up to the discretion of each student; however, each student is responsible for all information (notes, hand-outs, announcements, etc.) covered during class. You should ask fellow classmates for missed information, not the instructor or the TA. Attendance in lab is required to receive credit for the lab exercises and code reviews.

No "extra" work is allowed to make up for poor performance. Any student caught cheating will receive an F in the course, and face possible dismissal from the University. Students are advised that it is a violation to copy, or allow another to copy, all or part of an exam or program. No incompletes will be given for poor performance in the course.

Because of SPAM, when sending email please include "CS 211" in the subject.
