Completed and Ongoing Research

2015–2018 **Performance-Aligned Learning Algorithms with Statistical Guarantees**

My research focuses on designing robust adversarial learning algorithms for various tasks that simultaneously align with the learning objective by incorporating the performance metrics or loss functions into the learning process and provide the statistical guarantee of Fisher consistency. In my previous and ongoing works, I design robust adversarial learning algorithms for the following tasks:

- Multiclass classification
- Ordinal classification/regression with absolute and squared loss
- Classification with abstention
- Conditional graphical models (chain, tree & low-treewidth graph structures)
- Bipartite matching in graphs
- Fairness in machine learning
